

What is Narcan™?

Narcan (naloxone) is an opiate antidote. Opioids include heroin and prescription pain pills such as oxycodone, codeine and morphine. Narcan is a prescription medicine that blocks the effects of opioids and reverses an overdose.

Who can be prescribed Narcan™?

Trained individuals are allowed to possess and administer Narcan to a person having an overdose.

This event is funded in whole by grant # 1H79T080253-01 from the United States Department of Health and Human Services (HHS) Substance Abuse and Mental Health Services Administration (SAMHSA) through the CT Department of Mental Health and Addiction Services (DMHAS). Its contents are solely the responsibility of the authors and do not necessarily represent the official views of SAMHSA or HHS.
